New Tapur official version 2.3 released !!

(* important)

If you already have a previous version of Tapur installed, you had better remove it and reboot your computer first. Please install by administrator privilege. The following improvement was added to a previous version.

(New feature 2.23->2.3)

- + Win7 support

(New feature)

- + Skype4.0 support
- + Vista 64bit support
- + MP3 realtime encoding support

- + Extension program at the answering machine (mail forwarding / user program).
- + Auto voice recording
- + Hotkeys : Global shortcuts
- + Setting of registration of startup
- + Setting of frame rate for movie recording
- + Improvement of "Save voice file" and "Save movie file" functions
- + auto restart when system down
- + Germany version (help and installer only) - Translations in German by Peter Fischer(Thanks!)

(Bugfix)

- + works in multi-user login.
- + when "undisclosed_pstn:xxx" call come.
- + when the end of skype ID is period "."
- + recording did not finish at the time of the call end automatically in some case.
- + some bug fix (Bugfix 2.11->2.23) + error of the MP3 codec listing.
- + The list indication of the MP3 file took a long time.
- + [Salvage recorded files] menu cause error in some case.(Thanks Wes!) + [Options] menu cause error in some case. + some bug fix

(Change)

- + New Tapur icon!
- + Continue playing button : Play button -> Pause button.
