You can register Tapur in the Windows startup folder at the time of installation.

You can change this setting after installation. If you don't want to need it, please delete the link of Tapur in the Windows startup folder.

Go to Start/Programs/Startup. To delete, right click on the item and select "Delete"

In addition, if you want to stop answering machine function, check "Automatically invalidate the function of the answering service when starting Tapur" in the setting of Tapur.
